

LogisticsOS

World's fastest and most efficient route optimization engine

Funded by Y Combinator

Who we are

Route Optimization Algorithms as a Service

We provide route optimization algorithms as a service to automate route planning and fleet dispatching.

Tech-Savvy Teams

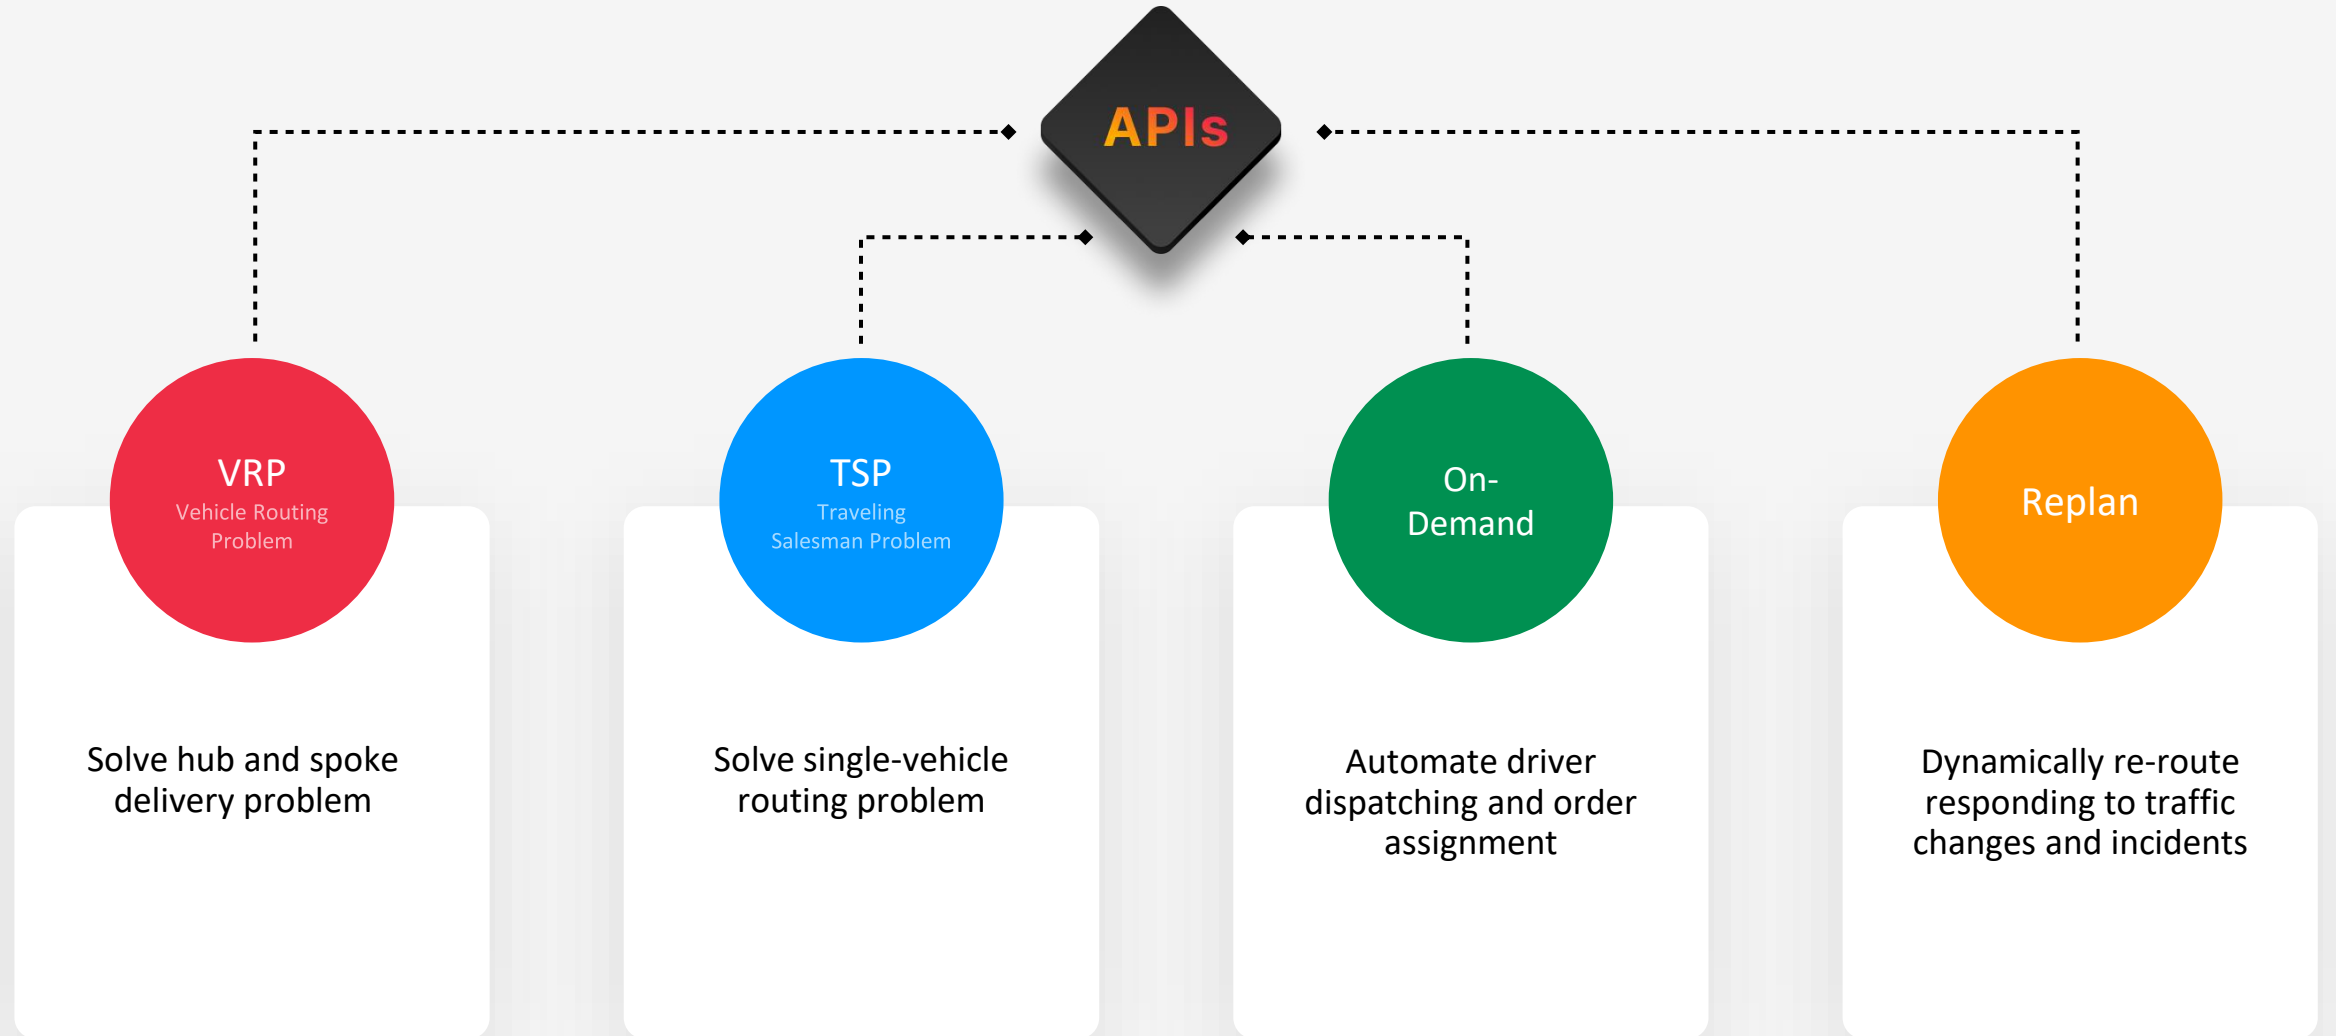

We are the people from Mapbox and AWS who developed route optimization solutions for USPS and FedEx.

Global presence with customers from North/South America, Europe, MENA, and Africa.

What we do

Highlights

Quality & Performance

Reduce delivery cost by

40%

Reduce delivery cost by up to 40% comparing to your in-house and other providers.

Optimization time

20x to 50x
faster

Optimize thousands of orders with hundreds of vehicles in a couple of minutes, which is 20 to 50 times faster than any other solution.

Scale up to

20,000
orders / request

Scale up to 20,000 orders per API request, which is 10 times more than the industry average.

Highlights

Scheduled Routing

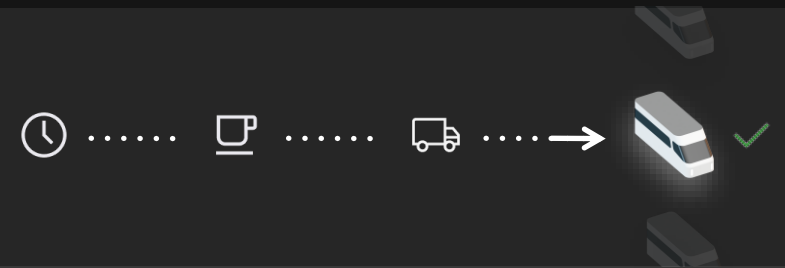

Cost optimization

Cost optimization based on customized fleet cost. e.g., minimize cost when mixing full-time and part-time drivers.

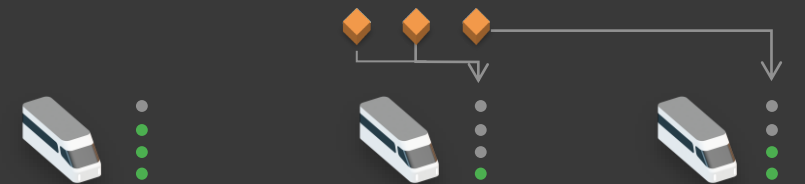

Real-life constraints

Real-life constraints like time window, driver breaks and shifts, vehicle capacity and capabilities.

Balance workload

Balance workload among drivers and utilize all full-time drivers.

Clustered routes

Naturally clustered routes where drivers stay in their own regions, improving traffic-aware ETA.

Highlights

On-demand Routing

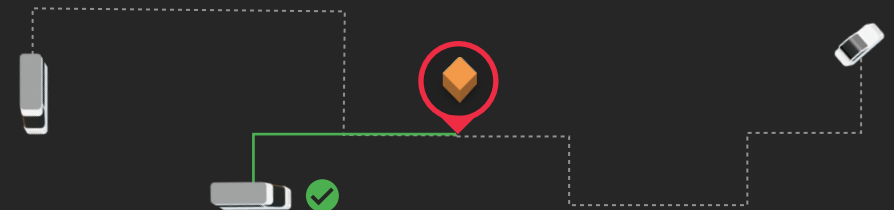

Multiple orders

Enable each driver to take multiple orders at same time.

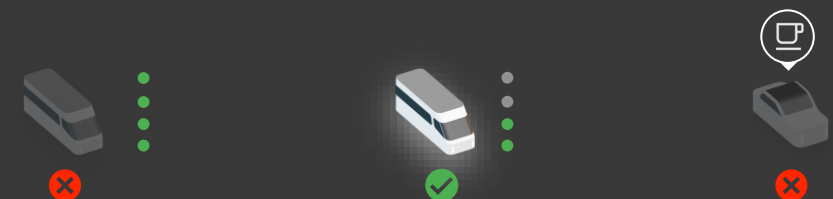

Assign orders automatically

Automatically assign orders to the best drivers while taking account of driver's ongoing deliveries.

Fair scheduling

Fair scheduling that balance workload among active drivers.

Highlights

Map & Traffic

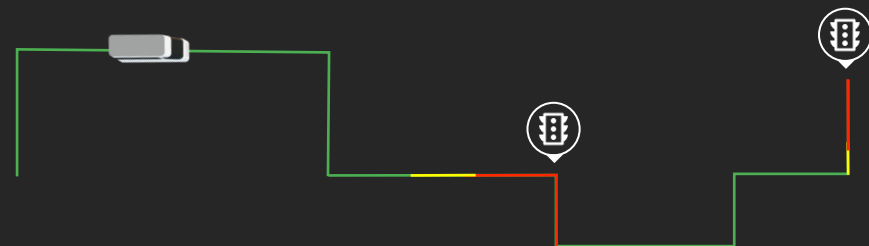

Switch between map providers

Easily switch between different map providers: OpenStreetMap, TomTom, HERE maps.

Predictive and historical traffic

Leverage predictive and historical traffic with TomTom and HERE maps.

Map customization

Map customization (restrict zones, roads, turns) tailored to your needs.
